Photo 27 – James Creek looking west (318)

Photo 28 – La Martre River Crossing (349)

Photo 29 – Typical spruce mixed forest (254)

Photo 30 - Typical shrubby bog (287)

Photo 31 - Typical jack pine mixed forest (301)

Photo 32 – Eskers along alignment (303)

Photo 33 – Typical overgrown poplar stands (339)

Photo 34 – Typical spruce forest w/ rocky terrain north of La Martre River (375)

Photo 35 – Typical mixed forest w/sandy terrain along south of alignment (2)

Photo 36 - Typical new pine forest growth (32)

Photo 37 - Typical wetland area (94)

Photo 38 – Typical open grassy area (118)

Photo 39 - Typical marsh area (324)

Photo 40 – Typical peat moss area (295)

Photo 41 – Typical ephemeral water along alignment (24)

Photo 42 – Burn area, new grass growth (111)

Photo 43 – Reaching Whatì Access Road (389)

2014 DOT Incidental Wildlife Observation Summary of ground truthing argo trip along proposed TASR, June 25-28, 2014

Site/Water Crossing	Photo #	Incidental Wildlife Survey	Wildlife Habitat Assessment
Seasonal water crossing near KM 8	23, 28	Bear and wolf prints in mud, including possible moose or bison prints (could not identify)	Area appears to be utilized as an animal trail due to cleared pathway. No water present during survey. Does not appear likely for fish to be present. Not suitable for fish.
Duport River	9	Fry observed	Suitable fish and bird habitat; mammals would also use as a water source.
Water crossing at KM 46	10	Fry observed; seashell midden from muskrat	Suitable fish and bird habitat; mammals would also use as a water and food source.
Water crossing at KM 57.5	13, 14, 15	Small furbearer prints; waterfowl prints; YOY fish observed; black & white waterfowl seen	Suitable fish and bird habitat; mammals would also use as a water and food source.
Water crossing at KM 63.5	30	Frog observed; birds heard	Shrubby bog suitable for amphibians and various avian species. Not a lot of water for larger mammals and no cover.
James River	27	No wildlife observed or heard	Extremely good fish habitat; shrubs and riparian edge suitable for nesting; cover for larger mammals; eskers surround section of creek.
La Martre River	16, 17, 18, 28	Lone bald eagle; jackfish; duck with ducklings; 2 hawks; unoccupied bird nest; birds heard; damselflies	Extremely suitable to all wildlife, as demonstrated by the amount of wildlife seen. Provides food, water, nesting and fish habitat.
Remaining water crossings	-	No wildlife observed	Seasonal water crossings were dry during survey and therefore unsuitable habitat for wildlife. Potential to host wildlife and fish when water is available.
Throughout alignment	3, 5	Chewed tree bark indicative of porcupine presence	Food source available for porcupines.
Throughout alignment	6	Ptarmigan droppings	Very suitable habitat for ptarmigan due to the amount of willow/food source.
Throughout alignment	-	Trapline boxes and old metal traps	Evidence of trapping taking place along the alignment suggests suitable habitat for small furbearing animals such as weasels and marten.
Marshy areas	7, 8, 11	Shorebirds such as sandpipers observed; beaver lodge	Marshy areas with suitable water ideal shorebird habitat and possible beaver habitat.
Near KM 56	12	Bear dug hole	Ease of access along alignment makes walking preferred route for lone bears.
