Ms Sherry Sian

Mackenzie Valley Environmental Impact Review Board

Oct 21, 2003

Dear Ms Sian

In addition to Robert Paterson's letter of Oct 17 regarding details of kimberlite "bulk" sampling by Snowfield Development Corp, I would like to illustrate the relatively small scale of such work. Each trench would require the clearing of trees from an area the size of a drill pad or 100 meters square followed by the excavation of a trench similar to that of digging up a small drainage culvert in a roadway. Reclamation would consist of backfilling each trench with the removed overburden topped by the removed organic material. Respectfully, Mike Beauregard Contract Geologist, Yellowknife
