

Conveyor gallery

September 2011 – Uneven roof line indicates structure is moving

September 2011 – Damaged support frame and concrete support pier

Contain arsenic trioxide and insulated with asbestos
Evidence of corrosion and weather damaged and risk of collapse

Canadă

Roaster Complex - Interior Highly Contaminated with Arsenic, Asbestos and other hazardous materials.

•Asbestos insulation in poor condition, fallen off on pipes, ceilings, etc.

 Abandoned duct network containing arsenic trioxide.

•Surfaces Contaminated with arsenic dust

Roaster Complex - Continuously Deteriorating Increasing Risks of Exposure

 Deterioration of interior ceilings and walls

 Gaps identified in roof structures

Openings in Structures/deterioration = Increased exposure risks to hazardous materials.

Deterioration of exterior

Roaster Stack

• Stack reported to contain ~14 tons of Arsenic Trioxide

Canada

• Deterioration and shifted steel plates at top of stack

 2011 risk analysis identified that underground improvements were necessary to address potential bulkhead or crown pillar failures

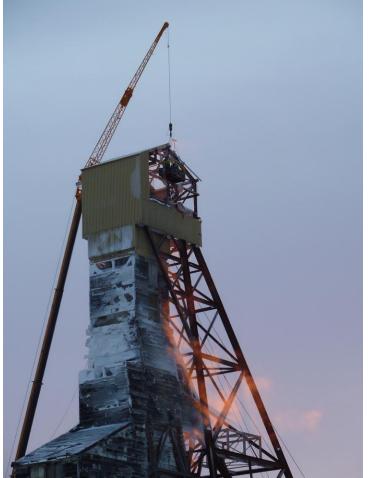

anac

- Improvement activities include
 - Drilling crown pillars to determine actual thickness
 - Backfill drifts and construct new drift plugs

C-shaft and other cladding

Reference No.	Site Component	Task Details	Part of EA Scope?						
	SSP	Tasks – LUP and WL							
1	Baker Creek Improvements	Maintenance and monitoring of existing raised banks and riprap.	×						
		Final grading and seeding of the cover of Jojo Lake Tailings (as per AANDC Inspector's directive dated May 30, 2011).	✓						
2	B1 Pit Wall Stability	Seasonal maintenance and monitoring of the flood protection berm between Baker Creek Reach 3 and B1 Pit .	×						
3	C-Shaft Securing	Remove cladding, secure conveyances and remove ropes.	×						
4	A1 Pit Ditch	Repairs to A1 Pit ditch to prevent further erosion with ongoing monitoring and maintenance.	×						
5	Building Cladding	Secure the cladding on the Mill, Warehouses 3 & 4 and other buildings.	×						
6	C1 Pit Channel Stability	Geotechnical drilling investigations along C1 pit to determine underground (i.e. crown pillar) stability.	×						
7	Roaster Complex Demolition	Demolition of roaster complex, including flues	✓						
8	Risk Review of Baker Creek	Geotechnical drilling	×						
9		Geotechnical drilling	×						
	Underground Stabilization	Backfill/Stability Work depending on outcome of geotechnical drilling.	✓						
10	Mill Conveyor	Encapsulate and remove sections of the conveyor.	\checkmark						
Design Support Drilling and Soils Testing LUP									
11	Freeze Optimization Study	Drilling around Arsenic Chamber 10	×						
12	Design Support	Geotechnical drilling and soils testing is required throughout mine site on an ongoing basis to support design.	×

FIGURE 2 – CURRENT SCENARIO

DESCRIPTION	DETAILS/ACTIVITIES	=	12	.'14	EA RELATED ACTIVITIES	NON-EA RELATED	AUTHORIZED	NOTES	STATUS
		Dec 2011	Aug 2012	l2 - Dec	ACTIVITIES	ACTIVITIES	REQUIRED		
#		0ct -]	Jan – J	Sept '1					
IMMEDIATE RISK MITIGA	TION							•	
1 Improvements	Increase Bank Height					х	Possible WL for work near a creek	Increase the bank height along the C1 pit.	Complete and will address seasonal decencies and continue monitoring.
	Cover Jojo Lake Tailings/Bank (Inspectors Direction)				x		s. 37 of NWTWA	Implementation of the Inspectors May 30,	Construction is complete for this season, final grading and seeding to be completed in summer of 2012.
B1 Pit Wall Stability 2	Construct Flood Protection Berm					х	Possible WL for work near a creek	Construct a flood protection berm between reach 3 and B1 Pit.	Complete. Seasonal decencies and monitoring.
Secure C-Shaft	Remove cladding, secure conveyances and remove ropes					x		Remove cladding along doghouse of C- Shaft for worker and public safety. Mine Health and Safety requirement.	Ongoing
A1 Pit Ditch Upgrade	Overflow assessment and revisions					х	Possible WL for work near a creek	Response to DFO letter of July 6, 2010.	Underway, seasonal monitoring and modifications may be required.
5 Secure Cladding	Mill, Warehouse 3 & 4					Х		Worker and public safety.	Underway
C1 Pit Channel Stability	Geotechnical Investigation							Geotechnical investigations (drilling) along C1 pit to determine underground stability. See U/G stabilization in advanced	
6						Х	LUP	remediation.	December-11
ADVANCED REMEDIATIO						1	1		
7 Demolition	Engineering Review					х			Issuance of contract in spring of 2012.
	Demolition of Flues				х		Possible WL	Containizer the waste from the flues.	Demo of flues to occur in the summer of 2012.
	Demolition of Roaster				х		Possible WL	Containizer the waste from the roaster.	Targeting the demolition in summer/fall of 2012.
8 for Baker Creek	Engineering Review of flooding risk of Baker Creek					х		Risk mitigation review of Baker Creek in the short term and long term.	Underway
	Geotechnical Investigation					х	LUP / Possible WL	Geotechnical drilling will be required to support analysis. Assume 20-30 holes along off site route.	Summer of 2012
	Analysis					Х			Engineering assessment
9 Stabilization	Engineering Review					х		Non intrusive	Underway
	Geotechnical Investigation					x	LUP	Phase I: December '11 / January '12 25-35 holes. Additional drilling to occur in the summer of 2012 (assume additional 10-20) holes along B1-Pit.	
	Backfill/Stability				x	~	LUP/WL		Status dependent on geotechnical investigation listed above.
10 Mill Conveyor	Encapsulate and remove sections of conveyor				х			Take down and secure the waste.
