

Material Safety Data Sheet

Section 1: PRODUCT AND COMPANY INFORMATION

Product Name(s): Limestone and Dolomite

Product Identifiers: Limestone, Dolomite, Dolostone, Carbonate Rock, Calcium Carbonate, Aggregates,

> Crushed Stone, Crushed Rock, Crushed Run, Gravel, Manufactured Sand, Concrete Sand, Asphalt Sand, Mason Sand, Fill Sand, Golf Course Sand, Base Material, Dense

Graded Aggregate

Manufacturer: **Information Telephone Number:**

Lafarge North America Inc. 703-480-3600 (9am to 5pm EST)

12950 Worldgate Drive, Suite 500 **Emergency Telephone Number:** 1-800-451-8346 (3E Hotline) Herndon, VA 20170

Product Use: Limestone and Dolomite are used in the manufacture of bricks, mortar, cement,

concrete, plasters, paving materials, and other construction applications. Limestone

and Dolomite are distributed in bags, totes and bulk shipment.

Do NOT use this product for abrasive blasting. This material safety data sheet and the

information contained herein were not developed for abrasive blasting.

Note: This MSDS covers many types of Limestone and Dolomite. Individual composition of

hazardous constituents will vary between types of Limestone and Dolomite.

Section 2: COMPOSITION/INFORMATION ON INGREDIENTS

Component	Percent (By Weight)	CAS Number	OSHA PEL -TWA (mg/m³)	ACGIH TLV-TWA (mg/m³)	LD ₅₀	LC ₅₀
Calcium Carbonate*	50-100	1317-65-3	15 (T), 5 (R)	10 (T)	NA	NA
Magnesium Carbonate*	0-50	546-93-0	15 (T), 5 (R)	10	NA	NA
Crystalline Silica (as Quartz)	0-15	14808-60-7	[(10) / (%SiO ₂ +2)] (R); [(30) / (%SiO ₂ +2)] (T)	0.025 (R)	NA	NA
Particulate Not Otherwise Regulated	-	NA	5 (R) 15 (T)	3 (R) 10 (T)	NA	NA

Note: Exposure limits for components noted with an * contain no asbestos and <1% crystalline silica

See Section 9 for information on the mineral composition of Limestone and Dolomite.

Section 3: HAZARD IDENTIFICATION

WARNING

Toxic - Harmful by inhalation.

(Contains crystalline silica)

DO NOT use for Abrasive Blasting.

Use proper engineering controls, work practices, and Personal Protective Equipment (PPE) to prevent exposure to dust.

Read MSDS for details.

Protection

Protection

Emergency Overview:

Limestone and Dolomites are an odorless, angular grey, white, and tan particles ranging in size from a powder to boulders. They are not combustible or explosive. A single, short-term exposure to Limestone and Dolomite presents little or no hazard.

Page 1 of 6 Revised: 03/01/08

Section 3: HAZARD IDENTIFICATION (continued)

Potential Health Effects:

Eye contact: Eye contact to airborne dust may cause immediate or delayed irritation or

inflammation. Eye exposures require immediate first aid and medical attention to

prevent significant damage to the eye.

Skin Contact: Limestone and Dolomite may cause dry skin, abrasions, discomfort, and irritation.

Inhalation (acute): Breathing dust may cause nose, throat or lung irritation, including choking, depending

on the degree of exposure.

Inhalation (chronic): Risk of injury depends on duration and level of exposure.

<u>Silicosis</u>: This product contains crystalline silica. Prolonged or repeated inhalation of respirable

crystalline silica from this product can cause silicosis, a seriously disabling and fatal

lung disease. See Note to Physicians in Section 4 for further information.

<u>Carcinogenicity</u>: Crystalline silica is classified by IARC and NTP as a known human carcinogen.

Autoimmune Disease:

Some studies show that exposure to respirable crystalline silica (without silicosis) or that the disease silicosis may be associated with the increased incidence of several autoimmune disorders such as scleroderma (thickening of the skin), systemic lupus

erythematosus, rheumatoid arthritis and diseases affecting the kidneys.

Tuberculosis: Silicosis increases the risk of tuberculosis.

Renal Disease: Some studies show an increased incidence of chronic kidney disease and end-stage

renal disease in workers exposed to respirable crystalline silica.

Ingestion: Do not ingest Limestone and Dolomite. Ingestion of small quantities of Limestone and

Dolomite is not known to be harmful; ingesting large quantities can cause intestinal

distress.

Medical Conditions Individuals with lung disease (e.g. bronchitis, emphysema, COPD, pulmonary

Aggravated by Exposure: disease) can be aggravated by exposure.

Section 4: FIRST AID MEASURES

Eye Contact: Rinse eyes thoroughly with water for at least 15 minutes, including under lids, to

remove all particles. Seek medical attention for abrasions.

Skin Contact: Wash with cool water and a pH neutral soap or a mild skin detergent. Seek medical

attention for rash or irritation.

Inhalation: Move person to fresh air. Seek medical attention for discomfort or if coughing or

other symptoms do not subside.

Ingestion: Do not induce vomiting. If conscious, have person drink plenty of water. Seek

medical attention or contact poison control center immediately.

Note to Physician: The three types of silicosis include:

 Simple chronic silicosis – which results from long-term exposure (more than 20 years) to low amounts of respirable crystalline silica. Nodules of chronic inflammation and scarring provoked by the respirable crystalline silica form in the lungs and chest lymph nodes. This disease may feature breathlessness and may resemble chronic obstructive pulmonary disease (COPD).

Page 2 of 6 Revised: 03/01/08

Section 4: FIRST AID MEASURES (continued)

- Accelerated silicosis occurs after exposure to larger amounts of respirable crystalline silica over a shorter period of time (5-15 years). Inflammation, scarring, and symptoms progress faster in accelerated silicosis than in simple silicosis.
- Acute silicosis results from short-term exposure to very large amounts of respirable crystalline silica. The lungs become very inflamed and may fill with fluid, causing severe shortness of breath and low blood oxygen levels.

Progressive massive fibrosis may occur in simple or accelerated silicosis, but is more common in the accelerated form. Progressive massive fibrosis results from severe scarring and leads to the destruction of normal lung structures.

Section 5: FIREFIGHTING MEASURES

General Hazard: Avoid breathing dust.

Extinguishing Media: Use extinguishing media

appropriate for surrounding fire.

Combustion Products: Limestone and Dolomite

decomposes at 825° C producing Calcium and Magnesium Oxide

Flashpoint & Method: Non-combustible

Firefighting Equipment: Limestone and Dolomite

pose no fire-related hazard. A SCBA is recommended to limit exposures to

combustion products when

fighting any fire.

Section 6: ACCIDENTAL RELEASE MEASURES

General: Place spilled material into a container. Avoid actions that cause dust to become

airborne. Avoid inhalation of dust. Wear appropriate protective equipment as described in Section 8. Do not wash Limestone and Dolomite down sewage and

drainage systems or into bodies of water (e.g. streams).

Waste Disposal Method: Dispose of Limestone and Dolomite according to Federal, State, Provincial and Local

regulations.

Section 7: HANDLING AND STORAGE

General: Stack bagged material in a secure manner to prevent falling. Bagged aggregate is

heavy and poses risks such as sprains and strains to the back, arms, shoulders and legs during lifting and mixing. Handle with care and use appropriate control

measures.

Engulfment hazard. To prevent burial or suffocation, do not enter a confined space, such as a silo, bin, bulk truck, or other storage container or vessel that stores or contains Limestone and Dolomite. Dust can buildup or adhere to the walls of a

confined space. The dust can release, collapse or fall unexpectedly.

Do not stand on stockpiles of Limestone and Dolomite, they may be unstable. Use engineering controls (e.g. wetting stockpiles) to prevent windblown dust from

stockpiles, which may cause the hazards described in Section 3.

Usage: This product is NOT to be used for abrasive blasting.

Cutting, crushing or grinding Limestone and Dolomite, hardened cement, concrete or other crystalline silica-bearing materials will release respirable crystalline silica. Use all appropriate measures of dust control or suppression, and Personal Protective

Equipment (PPE) described in Section 8 below.

Page 3 of 6 Revised: 03/01/08

Section 7: HANDLING AND STORAGE (continued)

Housekeeping: Avoid actions that cause dust to become airborne during clean-up such as dry

sweeping or using compressed air. Use HEPA vacuum or thoroughly wet with water

to clean-up dust. Use PPE described in Section 8 below.

Storage Temperature: Unlimited. Storage Pressure: Unlimited.

Clothing: Remove and launder clothing that is dusty before it is reused.

Warning: Crystalline silica exists in several forms, the most common of which is quartz. If

crystalline silica (quartz) is heated to more than 870° C it can change to a form of crystalline silica known as tridymite, and if crystalline silica (quartz) is heated to more than 1470° C it can change to a form of crystalline silica known as cristobalite. Crystalline silica as tridymite and cristobalite are more fibrogenic than crystalline silica as quartz. The OSHA PEL for crystalline silica as tridymite and cristobalite is one-half the PEL for crystalline silica (quartz); the ACGIH TLV crystalline silica as

tridymite and cristobalite is 0.05 mg/m³ (R).

Section 8: EXPOSURE CONTROLS AND PERSONAL PROTECTION

Engineering Controls: Use local exhaust or general dilution ventilation or other suppression methods to

maintain dust levels below exposure limits.

Personal Protective Equipment (PPE):

Respiratory Under ordinary conditions no respiratory protection is required. Wear a NIOSH

Protection: approved respirator that is properly fitted and is in good condition when exposed to

dust above exposure limits.

Eye Protection: Wear ANSI approved glasses or safety goggles when handling dust to prevent

contact with eyes. Wearing contact lenses when using Limestone and Dolomite.

under dusty conditions, is not recommended.

Skin Protection: Wear gloves in situations where abrasions from Limestone and Dolomite may occur.

Remove clothing and protective equipment that becomes dusty and launder before

reusing.

Section 9: PHYSICAL AND CHEMICAL PROPERTIES

NA. **Physical State:** Solid **Evaporation Rate:** Variety of colors pH (in water): Neutral Appearance: >1000° C Odor: None. **Boiling Point: Vapor Pressure:** NA. Freezing Point: None, solid. **Vapor Density:** NA. Viscosity: None, solid. **Specific Gravity:** 2.6-2.8 Solubility in Water: Insoluble

The following table describes the mineral composition of Limestone and Dolomite.

Rock Type	Rock	Mineral	Mineral Formula	Mineral Composition	
Sedimentary Rocks	Limestone	Calcite and Aragonite	CaCO ₃	Calcium Carbonate	
		Clay Minerals	(Mg, Al) Si ₃ O ₁₂	Magnesium Aluminum Silicate	
		Chert or Diatomite	SiO ₂	Silicon Dioxide	
	Dolomite (Dolostone)	Dolomite	CaMg(CO ₃) ₂	Calcium Magnesium Carbonate	
		Clay Minerals	(Mg, Al) Si ₃ O ₁₂	Magnesium Aluminum Silicate	
		Chert or Diatomite	SiO ₂	Silicon Dioxide	
Crystalline silica content: Sedimentary types 1-20%: Quartz 100%.					

Page 4 of 6 Revised: 03/01/08

Section 10: STABILITY AND REACTIVITY

Stability: Stable. Avoid contact with incompatible materials.

Incompatibility: Limestone and Dolomite dissolve in hydrofluoric acid, producing corrosive silicon

tetrafluoride gas. Silicates react with powerful oxidizers such as fluorine, boron

trifluoride, chlorine trifluoride, manganese trifluoride, and oxygen difluoride.

Hazardous Polymerization: None.

Hazardous Decomposition: Limestone and Dolomite decomposes at 825° C producing Calcium and

Magnesium Oxide.

Section 11 and 12: TOXICOLOGICAL AND ECOLOGICAL INFORMATION

For questions regarding toxicological and ecological information refer to contact information in Section 1.

Section 13: DISPOSAL CONSIDERATIONS

Dispose of waste and containers in compliance with applicable Federal, State, Provincial and Local regulations.

Section 14: TRANSPORT INFORMATION

This product is not classified as a Hazardous Material under U.S. DOT or Canadian TDG regulations.

Section 15: REGULATORY INFORMATION

OSHA/MSHA Hazard

This product is considered by OSHA/MSHA to be a hazardous chemical and should

Communication:

be included in the employer's hazard communication program.

CERCLA/SUPERFUND:

This product is not listed as a CERCLA hazardous substance.

EPCRA

This product has been reviewed according to the EPA Hazard Categories

SARA Title III:

SARA Section 313:

promulgated under Sections 311 and 312 of the Superfund Amendment and

Reauthorization Act of 1986 and is considered a hazardous chemical and a delayed

health hazard.

EPRCA

This product contains none of the substances subject to the reporting requirements of

Section 313 of Title III of the Superfund Amendments and Reauthorization Act of

1986 and 40 CFR Part 372.

RCRA:

If discarded in its purchased form, this product would not be a hazardous waste either by listing or characteristic. However, under RCRA, it is the responsibility of the product user to determine at the time of disposal, whether a material containing the product or derived from the product should be classified as a hazardous waste.

TSCA:

Calcium Carbonate and Crystalline silica are exempt from reporting under the

inventory update rule.

California Proposition 65:

Crystalline silica (airborne particulates of respirable size) is known by the State of

California to cause cancer.

WHMIS/DSL:

Limestone and Dolomite may be subject to WHMIS depending on the intended use and worker exposure. Limestone and Dolomite products containing crystalline silica

and calcium carbonate are classified as D2A, and are subject to WHMIS

requirements.
