Good afternoon Jason,

Thank you for getting back to me.

It sounds as though this information is not readily available. We welcome any documentation you may wish to submit, although time may be a factor. What is the earliest you would be able to compile this information and get it to Gartner Lee Ltd., our consultant?

The main constraint on timing is the release date for the Cumulative Effects Study. It is August 20th, 2003. Delays in the process may require adjustments to the schedule and potentially the release date for the Study.

Any change to the schedule would require approval from the Review Board. They are meeting next week. If you can tell me how long it would take to get this information together, I can provide this information to the Review Board for their consideration.

I will call you to follow up.

Sherry

*Please note: this submission date (Aug. 6/03) would not affect release date for study.*

Subject: RE: Cumulative Effects Study of Drybones/Wool Bay

Sherry,

Sorry for the delay in responding to your e-mail, I've been out of the office on duty travel since mid last week.

Regarding traditional land use information the NWTMN would be willing to submit a written document outlining activities by our Fort Resolution Beneficiaries. I would request that some time be permitted for me to collect this information from the communities.

Let me know your thoughts on this issue.

Regards,

Jason E. Lepine

Subject: Cumulative Effects Study of Drybones/Wool Bay

Hi Jason,

Further to the fax out of Friday, I was wondering if the NWT Métis Nation would like to contribute any traditional use information for the Cumulative Effects study of the Drybones/Wool Bay area.

If you are available, I would like to discuss this with you sometime today or tomorrow. Please let me know when I should call. It may take about 30-60 minutes. Specifically, I would like to:

- provide you with the background;
- describe what the Review Board is able to do; and
- discuss the NWT Métis Nation's preferences and/or concerns regarding the inclusion of traditional land use information.

Thank you.

Sherry
