

Meeting Report

Main Issue:

Aesthetic Effects (visual) within the proposed East Arm National Park Reserve

Attendees:

Damian Panayi and Linda Zurkirchen representing Dezé Energy
Wendy Botkin, Parks Canada

Meeting date:

November 26, 2009 (via email)

Summary of discussion:

Parks Canada has raised questions regarding aesthetic effects of the transmission line in the study area of the proposed East Arm National Park Reserve.

Developer commitment(s):

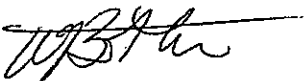

During the technical sessions of October 5, 2009 (Day 3), Dezé Energy committed to preparing graphics illustrating the proposed transmission line in the proposed East Arm Park area. The graphics would likely be prepared using a montage of photographs taken from view points, with a transmission line superimposed to the correct scale, colour, and structure. Dezé Energy has proposed several viewpoints such as Old Fort Reliance and Pike Portage (see the DAR chapter 15.10), and will confirm these with Parks prior to preparing the graphics.

Outstanding issue(s) for the party:

None

Action Items:

Dezé Energy re-affirms the commitment to collect the photos for the montage during the summer of 2010, and to prepare the graphics by the fall of 2010.
