

Instructions for downloading Developer's Assessment Report for Avalon Rare Metals Inc.'s Thor Lake Rare Earth Element Project

Due to the large file size of the overall Developer's Assessment Report and Appendices, the main document and supporting appendices had to be divided to manageable file sizes for online use before posting to the online registry.

Online file titles indicate the subject matter the file contains as well as pertinent numerical information. For example, for the "Main Document" of the Developer's Assessment Report, the online file title "02 Thor Lake Project DAR Description of Existing Biophysical Environment [018-055]" refers to "section 2" of the main document and [018-055] refers to the page number as the numbers appear on the text of the document (page 18 and page 55 respectively).

NOTE: Many of Avalon's appendices are subdivided contractor's reports. The digital file title that appears on the Review Board website is for sorting purposes only to establish numerical order of files for online posting.

Please refer to the index and tables of content within Avalon's DAR and appendices for navigation within the main report or appendix A, Appendix B etc. The Table of Contents, Concordance Table and List of Appendices are available as single files and can assist with navigation through the online documents and files. Please contact the Review Board for any questions.
