

Undertakings from Day 2: 6 through 10 (5 total)			
Undertaking #	Topic – Subtopic	Undertaking	Due Date*
Undertaking #6	Caribou mitigation measures	Will meet with parties during the undertaking period to identify and evaluate additional compensatory mitigation measures that will improve the health of the Bathurst herd. DDEC will solicit input from GNWT to ensure that they are in agreement with the mitigation measures. DDEC and other parties will provide a joint summary of these meetings. DDEC will also report on any actions that may be taken as a result of these meetings.	
Undertaking #7	CRMP details	DDEC will provide details from the CRMP regarding how collar data can be incorporated into real-time monitoring efforts, given the scale differences between on-road visual observations and collar data as well as the timing differences between when data is received by the GNWT versus obtained by DDEC.	
Undertaking #8	Convoys	DDEC will provide specifics regarding thresholds in caribou number and proximity that would trigger convoying rather than short or long term road closures. This information will also include specifics regarding land trains.	
Undertaking #9	Interim ZOI mitigation measures	IEMA will undertake to bring concrete ideas of interim ZOI mitigations to the review board in advance of the meeting described in undertaking #6 and will also bring these ideas to the meeting described in undertaking #6.	
Undertaking #10	3.9% herd productivity decline due to cumulative effects	GNWT will provide information to the review board commenting on the compromises or trade-offs that would offset the 3.9% decline to the herd productivity due to cumulative effects associated with the Jay project (as referenced in DAR Table 15.5).	

*If not specified, due date is October 9th, 2015.
