

Note to File

EA1415-02

Husky Oil Operations Limited, Chedabucto Mineral Exploration Project

Re: Review Board staff teleconference with Husky- February 26, 2015

On Thursday February 26, 2015 Review Board staff held a teleconference with representatives of Husky to discuss the EA process. This note to file provides a brief summary of the meeting.

The discussion started with the Review Board staff notifying Husky of information requests the Review Board will issue shortly. These information requests will ask clarification on the timing of proposed activities and site access, information on cumulative effects and alternative means of carrying out project activities and request an update to Husky's public engagement efforts.

Husky gave a brief overview of the project timelines and provided clarification on site access. This information will be provided in writing by Husky in response to the Review Board information requests.

Husky emphasised that this project is a staged exploration project with each season of work dependent on the results of the past season. Hence, it is difficult for Husky to provide specifics of activities that may occur after each season.
