I had a call from someone with BHP today who seems concerned with some (apparently) misinformation that's being tossed around about their applications for mining 3 more pipes (I think we're the guilty tossers from the sounds of it). Because of that, they would like to have an MDAG meeting with relevant regulators to walk them through the project and what they're trying to do.

I'd be happy to convene an MDAG for them, but, as I said in my voice-mail, they're in EA now and I don't want to tread on any EA toes. I think it would be helpful for both the company and regulators if we did something...How about if we (Mineral Development Division) convene a sort of pathfinder meeting that would allow BHP to briefly present their project and regulators could give their advice on regulatory requirements and, specifically how they would all fit together in the MVRMA process. Could you let Lorne or I know if and how you would like us to proceed with this?

Thanks

Teleconferenced with Kate Hearn.

Agreed that they (BHP) could hold their own public meeting to explain the project. It would be inappropriate to hold a MDAG meeting at this stage now that it is in the EA process.

Re: Project Description – Proposed Development of Sable, Pigeon and Beartooth Kimberlite Pipes

Dear Darrell:

Enclosed is the project description that has been prepared for environmental screening by the Mackenzie Valley Environmental Impact Review Board. I have sent copies of this to your Chiefs and Lands and Environment Committees.

We understand that the Independent Monitoring Agency has already indicated to the MVEIRB that they wish to intervene in the process. Their participation will insure that the terms of the Environmental Agreement are properly considered in the assessment and that independent technical assessments of the scientific documents are available to the Aboriginal groups that initialed the Environmental Agreement.

BHP would like to make arrangements through you, to meet with the Yellowknives in N'dilo and Dettah and Chipewyan of Lutsel K'e to explain this initiative. The company is open to individual Treaty meetings in all of the communities if you feel this would be of benefit to the Akaitcho Treaty 8.

The new pipes are in the existing BHP Claim Block and were covered by baseline studies conducted for the 1995 EIS prepared by BHP for the EARP review. During the EARP process, BHP made it clear that as new discoveries were made additional resources would be added to EKATI™'s ore reserves. Since mid-1996, BHP has been assembling additional baseline information and effects monitoring data that will be needed for the review of this extension of the EKATI™ mine plan.

Evaluations completed after the EARP review suggest, given current market condition that the Leslie Kimberlite Pipe is only marginally economical. The loss of Leslie dropped the projected life of mine from the 25 years discussed in the original EIS, to 17 if you include Sable as part of the resource. Pigeon and Beartooth together provide about a year's

worth of production. Without Sable, the EKATI™ Diamond Mine will run out of ore in about 2013. When the development of these pits is approved, the EKATI™ Diamond Mine will have a mine life of about 18 years.

BHP believes that continuing exploration will prove more pipes on the claim block to be economically viable and further extend the life of the EKATI™ Diamond Mine beyond the original 25 years suggested in the EIS.

Expanding the EKATI™ Diamond Mine ore reserves will allow BHP to continue to provide the suite of benefits outlined for the Yellowknives and Chipewyan of Akaitcho Treaty 8 in their 1996 Impact and Benefit Agreement. BHP's efforts to extend the life of the EKATI™ Diamond Mine helps to provide jobs security, ongoing business opportunities, scholarships and the payments provided by your agreement.

If Akaitcho Treaty 8 would like to meet with BHP regarding the Sable, Pigeon and Beartooth Proposal, please contact Chris Hanks at 669-6145. He will make arrangements for you to meet with the appropriate people from BHP.

Sincerely yours,

Scott Williams

Re: Project Description – Proposed Development of Sable, Pigeon and Beartooth Kimberlite Pipes

Dear Jimmy:

Enclosed is the project description that has been prepared for environmental screening by the Mackenzie Valley Environmental Impact Review Board. I have sent a copy of this package to the KIA.

We understand that the Independent Monitoring Agency has already indicated to the MVEIRB that they wish to intervene in the process. Their participation will insure that the terms of the Environmental Agreement are properly considered in the assessment and that independent technical assessments of the scientific documents are available to the Aboriginal groups that initialed the Environmental Agreement.

BHP would like to make arrangements through you, to meet with the people of Kugluktuk and the Inuit beneficiaries of KIA to explain this initiative. The company is open to individual meetings in the community of Kugluktuk and with KIA if you feel this would be of benefit to the people.

The new pipes are in the existing BHP Claim Block and were covered by baseline studies conducted for the 1995 EIS prepared by BHP for the EARP review. During the EARP process, BHP made it clear that as new discoveries were made additional resources would be added to EKATI™'s ore reserves. Since mid-1996, BHP has been assembling additional baseline information and effects monitoring data that will be needed for the review of this extension of the EKATI™ mine plan.

Evaluations completed after the EARP review suggest, given current market condition that the Leslie Kimberlite Pipe is only marginally economical. The loss of Leslie dropped the projected life of mine from the 25 years discussed in the original EIS, to 17 if you include Sable as part of the resource. Pigeon and Beartooth together provide about a year's

worth of production. Without Sable, the EKATI™ Diamond Mine will run out of ore in about 2013. When the development of these pits is approved, the EKATI™ Diamond Mine will have a mine life of about 18 years.

BHP believes that continuing exploration will prove more pipes on the claim block to be economically viable and further extend the life of the EKATI™ Diamond Mine beyond the original 25 years suggested in the EIS.

Expanding the EKATI™ Diamond Mine ore reserves will allow BHP to continue to provide the suite of benefits outlined for the Inuit in their 1999 Impact and Benefit Agreement. BHP's efforts to extend the life of the EKATI™ Diamond Mine helps to provide jobs security, ongoing business opportunities, scholarships and the payments provided by your agreement.

If the people of Kugluktuk and the KIA would like to meet with BHP regarding the Sable, Pigeon and Beartooth Proposal, please contact Chris Hanks at 669-6145. He will make arrangements for you to meet with the appropriate people from BHP.

Sincerely yours,
