Subject: DoT concern with bear baiting operation

Lance/Raymond,

Just had a chat with Michael Conway with DOT and he explained that their concern last year was related to the incident of the wounded bear. Apparently the wounded bear was in the area of active gravel pits and workers had concern for their safety. He is requesting a 2km buffer around active gravel pits to ensure worker safety. This buffer is also related to their concern regarding the use of high powered rifles in proximity of workers.
